## Mandarin Lights Deciduous Azalea *Rhododendron 'Mandarin Lights'*

Height: 5 feet

Spread: 5 feet

Sunlight: ○ ●

Hardiness Zone: 4a

Group/Class: Northern Lights Series

### Description:

A hardy deciduous azalea, covered in deep orange flowers in spring before the leaves, tall upright habit and good fall color; absolutely must have well-drained, highly acidic and organic soil, use plenty of peat moss when planting

### Ornamental Features

Mandarin Lights Deciduous Azalea is bathed in stunning clusters of lightly-scented tomato-orange trumpet-shaped flowers with a orange flare at the ends of the branches in mid spring before the leaves. It has green foliage throughout the season. The narrow leaves turn an outstanding purple in the fall. The fruit is not ornamentally significant.

### Landscape Attributes

Mandarin Lights Deciduous Azalea is an open multi-stemmed deciduous shrub with a more or less rounded form. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage.

This is a relatively low maintenance shrub, and should only be pruned after flowering to avoid removing any of the current season's flowers. It has no significant negative characteristics.

Mandarin Lights Deciduous Azalea is recommended for the following landscape applications;

## **Planting & Growing**

Mandarin Lights Deciduous Azalea will grow to be about 5 feet tall at maturity, with a spread of 5 feet. It tends to be a little leggy, with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 40 years or more.

This shrub does best in full sun to partial shade. It requires an evenly moist well-drained soil for optimal growth, but will die in standing water. It is very fussy about its soil conditions and must have rich, acidic soils to ensure success, and is subject to chlorosis (yellowing) of the leaves in alkaline soils. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid.

## Special Notes

Not suitable for clay soils!
