

**Paul's Gold Threadleaf
Falsecypress**

Chamaecyparis pisifera 'Paul's Gold'

Height: 3 feet

Spread: 4 feet

Sunlight:  

Hardiness Zone: 4b

Other Names: Japanese Falsecypress, Sawara
Falsecypress

Description:

A charming, well behaved selection with its year-round golden-green foliage and dense, compact habit; ideal for color and texture contrast in the garden; tolerates mild drought once established

Ornamental Features

Paul's Gold Threadleaf Falsecypress is a dwarf conifer which is primarily valued in the garden for its interestingly mounded form. It has attractive gold foliage with hints of forest green which emerges yellow in spring. The threadlike sprays of foliage are highly ornamental and remain gold throughout the winter.

Landscape Attributes

Paul's Gold Threadleaf Falsecypress is a multi-stemmed evergreen shrub with a mounded form. It lends an extremely fine and delicate texture to the landscape composition which should be used to full effect.

This is a relatively low maintenance shrub. When pruning is necessary, it is recommended to only trim back the new growth of the current season, other than to remove any dieback. It has no significant negative characteristics.

Paul's Gold Threadleaf Falsecypress is recommended for the following landscape applications;

Planting & Growing

Paul's Gold Threadleaf Falsecypress will grow to be about 3 feet tall at maturity, with a spread of 4 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a slow rate, and under ideal conditions can be expected to live for 60 years or more.

This shrub does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type, but has a definite preference for acidic soils. It is highly tolerant of urban pollution and will even thrive in inner city environments. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America.
