

Gold Heart Bleeding Heart
Dicentra spectabilis 'Gold Heart'

Height: 3 feet

Spread: 3 feet

Spacing: 30 inches

Sunlight: ● ●

Hardiness Zone: 2a

Ornamental Features

Gold Heart Bleeding Heart features delicate nodding pink heart-shaped flowers with white tips dangling from the stems from late spring to early summer. Its attractive ferny compound leaves emerge lemon yellow in spring, turning chartreuse in color throughout the season.

Landscape Attributes

Gold Heart Bleeding Heart is an herbaceous perennial with a mounded form. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This plant will require occasional maintenance and upkeep, and should be cut back in late fall in preparation for winter. It is a good choice for attracting butterflies to your yard. It has no significant negative characteristics.

Gold Heart Bleeding Heart is recommended for the following landscape applications;

- Mass Planting
- General Garden Use

Planting & Growing

Gold Heart Bleeding Heart will grow to be about 3 feet tall at maturity, with a spread of 3 feet. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 30 inches apart. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 15 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen! As this plant tends to go dormant in summer, it is best interplanted with late-season bloomers to hide the dying foliage.

This plant does best in partial shade to shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone over the growing season to conserve soil moisture. This is a selected variety of a species not originally from North America. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Special Notes

Old fashioned varieties of bleeding hearts go dormant in the summer.
